What is an antibody test?

An antibody test can tell someone whether they have had the virus that causes Covid-19 in the past, by analysing a blood sample.

What do antibody test results mean?

A positive antibody test demonstrates that someone has developed antibodies to the virus. The presence of antibodies signals that the body has staged an immune response to the virus.

Covid-19 is a new disease, and our understanding of the body's immune response to it is limited. We do not know, for example, how long an antibody response lasts, nor whether having antibodies means you can't transmit the virus to others.

Our understanding of the virus will grow as new scientific evidence and studies emerge.

An antibody test result can only tell an individual whether or not they have had the virus in the past. Antibody tests are also being used currently in surveillance studies, to understand what proportion of the population have already had the virus.

If you test positive for antibodies, can you ignore lockdown restrictions?

No. There is no evidence yet to suggest that those who have been proven to have had the virus are immune. This is the position of the World Health Organisation.

You should continue to comply with social distancing measures and government guidelines. All infection prevention and control measures must continue to be in place irrespective of the presence of antibodies.

How will I be informed of the result?

The healthcare professional or team who requested the test should inform you of your result.

How will my information be used?

The anonymised results across the testing programme will provide information on the prevalence of COVID-19 in different regions of the country and help better understand how the disease spreads.

Are there any risks to having the test?

There are no specific risks for this antibody test compared to having your other blood tests, such as feeling dizzy and faint during and after the test, bruising where the blood was taken from, and very rarely an infection or phlebitis (swelling of the vein) at the site where blood was taken.

Further information

More information on the different types of COVID-19 tests and how they work can be found on the government website at:

If you have any queries or concerns about the content of this leaflet please call (01983) 822099 and ask to speak to the relevant department.

Valuables should not be brought into the hospital. If patients have to bring in valuable items they should ask a nurse to store them safely and request a receipt for the items. You may not be able to have the valuable items returned if the time of discharge from hospital is out of hours.

We are sorry but the Trust cannot accept responsibility for loss or damage to items not given for safe keeping.

You can get further information on all sorts of health issues online at: **www.nhs.uk**

For Health advice and out of hours GP service please call the NHS 111 service on: **111**

We Value Your Views On Our Service

If you wish to comment on the care which you, your relative or friend has received, we will be pleased to hear from you. Please speak to the person in charge of the ward, clinic or service in the first instance or ask them to contact the PALS Team. If you wish to contact them directly, telephone on **01983 534850**.

Alternatively you may prefer to write to:

Chief Executive
Isle Of Wight NHS Trust
St Mary's Hospital
Newport, Isle of Wight, PO30 5TG

You can also share any concerns you have about our services with the Care Quality Commission (CQC) on **03000 61 61 61** or at **enquiries@cqc.org.uk**

All NHS sites are no smoking areas.

If you would like help and advice to stop smoking please call: Freephone 0800 169 0 169 to talk to the NHS Smoking Helpline.
