## What is a cannula?

A cannula is a small plastic tube that sits in the vein. It is used for giving medication to your child.

## How to care for the cannula.

- It is important to keep the bandage around the cannula in place. This will keep the cannula in position and protect it from being dislodged. It also helps to keep the area clean.
- The cannula must be kept dry at all times. If the area becomes wet the bandage may loosen and the cannula may become dislodged. Getting the cannula wet may also increase the chance of infection.

## What if the cannula falls out?

- If the cannula becomes dislodged or falls out, the area may bleed for a short while. If this happens, apply pressure with a clean dressing to the site and wait for the bleeding to stop. You can cover the area with a plaster afterwards.
- You should then let NICU know that the cannula has fallen out and that you will be coming to the ward to have a new one put in. You can contact the ward directly on **01983 534337**.

## Allergic Reactions

If your child becomes unwell, develops a rash or a temperature please contact the unit for further advice on **01983 534337**.

However if your child develops **breathing difficulties** please **call 999** for an ambulance.

If you have any concerns about your child's cannula and would like some advice at any time, please do not hesitate to contact the children's ward on **(01983) 534337**.
