- You have a very small break in the radial head or neck – one of the bones in your elbow.
- These fractures almost always heal well with time and use – no specific treatment is required and therefore routine follow-up is unnecessary.
- A sling will hold your elbow in a comfortable position for a few days.
- You should wean yourself off this as your pain settles and aim to remove the sling completely as soon as you feel able.
- You may initially require regular pain killers as it is important to keep gently moving the elbow and gradually resume daily activities within the limits of discomfort. This will prevent stiffness and ensure the quickest return to normal function.
- Forcible stretching is unnecessary, and is likely to cause pain and delay your recovery.
- Symptoms are usually minor, but may take up to 3 – 6 weeks to settle.
- There may be slightly reduced movement at the elbow, especially on straightening it, but this is unlikely to affect your function.

Should you have any concerns following discharge from the hospital, please contact either the:

- 1) Fracture Clinic: 01983 534655 (9.00am until 4.00pm, Monday to Friday) or;
- 2) Emergency Department out of hours.

**If you have any queries or concerns about the content of this leaflet please call (01983) 524081 and ask to speak to the relevant department.**

If you require this leaflet in another language, large print or another format, please contact the PALS Team, telephone **01983 534850**, who will advise you.

Valuables should not be brought into the hospital. If patients have to bring in valuable items they should ask a nurse to store them safely and request a receipt for the items. You may not be able to have the valuable items returned if the time of discharge from hospital is out of hours.

We are sorry but the Trust cannot accept responsibility for loss or damage to items not given for safe keeping.
